

Natural sleep for all little kiwis!

Care instruction for Natural Cot Mattress

- We recommend for you to use your mattress on a slat base, rather than directly on the floor.
- Use a natural mattress protector to keep your mattress in good condition.
- Turn your mattress end to end and rotate **weekly**.
- **Air your mattress regularly, In winter you will need to do this more often**, especially if the room feels damp and has poor ventilation. You can air your mattress by placing it outside on a warm sunny day. In wet weather run a dehumidifier if possible.
- To clean your mattress lightly sponge it some vinegar and water. Try not to wet the inside natural fibres. Dry with and an iron.
Please don't remove the cover.
- When using on polished slats or plywood, place a woollen blanket between this surface and the mattress. This will help prevent condensation between the mattress and the base surface. Turn your mattress more frequently.

! If you use a **Baby monitor**, please, know that it is a piece of plastic, which doesn't breath and will reflect the moisture back into the mattress. It can be a reason for mouldy patch to appear. To avoid it please make a woollen cover for the monitor pad or put it under woollen blanket and under the mattress You will need to air regular those items.
